

BharatGen - ASR: Hindi

Sector Agnostic

Generated: Wed Apr 23 2025

Model Type: Automatic Speech Recognition Model

Source: BharatGen

Parameter	Value
Short Description What this Model is about	This is a 30M-parameter hybrid CTC-RNNT Branchformer model designed for Automatic Speech Recognition (ASR) in the Hindi language.
Long Description / About Model Brief detailed insight into Model content/use	This 30M-parameter hybrid CTC-RNNT Branchformer model, developed by BharatGen, is designed for Automatic Speech Recognition (ASR) in Hindi. Trained on over 1,000 hours of Hindi audio-text parallel data, the model achieves a Word Error Rate (WER) of 14.85% on the Vistaar benchmark, averaged across all included datasets. For any queries, please visit https://bharatgen.discourse.group/invites/BcouFsKk4g
License Legal terms under which the model can be used.	MIT
Hosted by Model creator and maintainer	BharatGen
Model Type Category like classification, regression, etc.	Automatic Speech Recognition Model
Model Format File format used for the model (eg., .pt, .onnx)	PyTorch
Visibility Access level: public, private, or restricted.	Restricted
Source Organization Entity that created or submitted the model.	BharatGen
Sector Industry or domain the model serves.	Sector Agnostic
Updated date & Time Most recent update timestamp.	Tue Apr 29 2025
Created by Name of the model's original creator.	

Parameter	Value
Size Storage size of the model file.	94.49 MB
